DP-OPS-0045: Reconstructing and Perfecting TASK.md

1. Session State (The Anchor)

Pointer: storage/handoff/OPEN-main-4b581538.txt

Active Branch: main

Base HEAD: 4b581538

Context Manifest: ops/lib/manifests/CONTEXT.md

2. Logic Pointers (The Law)

Primary Constraint: PoT.md (Policy of Truth) wins in all conflicts.

2.1 Governance Pointers

- Jurisdiction: PoT.md Section 3 (Ops, Docs, Projects, Tools).
- Git Authority: PoT.md Section 4.1 (Operator owns main; Integrator owns TASK.md).
- Behavioral Standard: PoT.md Section 4.2 (Linguistic Precision, Literalism).

2.2 Execution Pointers (The Toolchain)

- Linguistic Precision: tools/lint/style.sh (Enforces no contractions).
- Structure Verification: tools/verify.sh (Enforces Filing Doctrine).
- Context Hygiene: tools/lint/context.sh (Enforces manifest compliance).
- Truth Integrity: tools/lint/truth.sh (Enforces canon spelling).
- DP Validation: tools/lint/dp.sh (Enforces TASK schema).

3. Current Dispatch Packet (DP)

DP-OPS-0045: Reconstructing and Perfecting TASK.md

3.1 Freshness Gate (Must Pass Before Work)

Base Branch: main

Required Work Branch: work/task-perfection-0045

Base HEAD: 4b581538

Gate Artifacts (Must Match):

- OPEN: storage/handoff/OPEN-main-4b581538.txt
- OPEN-PORCELAIN: storage/handoff/OPEN-PORCELAIN-main-4b581538.txt
- Dump: storage/dumps/dump-platform-main-4b581538.txt
- Dump Manifest: storage/dumps/dump-platform-main-4b581538.manifest.txt

Gate Commands (Must Pass):

- bash tools/lint/context.sh

3.2 Required Context Load (Read Before Doing Anything)

- Loaded: PoT, SoP, TASK, CONTEXT, MAP
- PoT.md (Constitutional Law)
- SoP.md (State of Play Ledger)
- TASK.md (Active Surface - Target of reconstruction)
- tools/lint/dp.sh (Schema Enforcement)

3.3 Scope and Safety

Objective: Reconstruct TASK.md to a "Golden Template" standard. This reconstruction restores lost governance sections (Staffing, Behavioral), enforces the decimal heading schema (3.1-3.4), binds the Freshness Gate to the Base HEAD, and mandates the "Healthy Results File" protocol for all future receipts.

Constraints:

- No scope expansion beyond the allowlist.
- No new directories.
- TASK.md must pass tools/lint/dp.sh validation immediately upon reconstruction.
- No edits to PoT.md.

Target Files allowlist (hard gate):

- TASK.md
- SoP.md

3.4 Execution Plan (A-E Canon)

3.4.1 State

- **Current Status:** TASK.md structure is degraded; it lacks explicit Logic Pointers to PoT.md and the Freshness Gate schema does not enforce the 4-artifact requirement.
- **Target State:** TASK.md is a high-fidelity "Living Surface" with a "Pointer-First" constitution, explicit toolchain references, and a hardened receipt protocol.

3.4.2 Request

1. **Overwrite TASK.md** with the content defined in the **Patch / Diff** section below.
2. **Verify** the new structure using tools/lint/dp.sh TASK.md.
3. **Update SoP.md** to log the architectural reconstruction.

3.4.3 Changelog

- **TASK.md:** Complete rewrite to "Golden Template" standard.
  - Restored "Section 1: Session State" with explicit Anchor fields.
  - Restored "Section 2: Logic Pointers" mapping directly to PoT.md and tools/.
  - Hardened "Section 3.1: Freshness Gate" to require 4 HEAD-bound artifacts.
  - Hardened "Section 3.4.5: Receipt" to mandate the "Healthy Results File" schema.
  - Hardened "Section 4: Closeout" to mandate the "Varied Wording" rule.
